MAA-2026-027883

Date: 10 Jun 2026

Week 47 · 3 Trimester

EDD: 2026-04-16

ANC Visits: 0

Report Period: 2026-05-11 → 2026-06-10 · Total Vitals: 1 · Flagged: 1

RISK: URGENT — Seek medical care immediately

- high diastolic blood pressure (120 mmHg)
- critical low oxygen saturation (SpO2 76%)
- significant proteinuria (2+)
- borderline high fetal heart rate (180 bpm)
- no ANC visits completed

Vitals Summary

Metric	Average	Min	Max	Status
Blood Pressure	130/120 mmHg	130	130	OK
Weight	77.8 kg	77.8	77.8	Δ — kg
Pulse	70 bpm	—	—	OK
SpO2	76%	—	—	■ FLAG
Temperature	37.9°C	—	—	■ FLAG
Haemoglobin	12.0 g/dL	—	—	OK
Fasting Glucose	90 mg/dL	—	—	OK
Urine Protein	2+	—	—	■ FLAG
Fetal Heart Rate	180 bpm	—	—	■ FLAG
Flagged Readings	1	—	—	

AI Health Analysis

Dear mother, your recent check shows several concerning signs such as high blood pressure, low oxygen levels, and protein in urine, which need immediate medical attention. Please seek care at the nearest health facility right away.

[illegible]

ANC Advice: At 47 weeks (postterm) you need immediate ANC assessment; WHO recommends at least 8 visits, and you have none. Schedule an emergency visit today and plan weekly follow-ups thereafter.

Nutrition Tip: Increase intake of iron-rich foods like leafy greens, lentils, and fortified cereals, and add vitamin C sources (citrus, tomatoes) to improve iron absorption.

Recommendations

1. Visit a qualified health facility or obstetrician within the next few hours for urgent assessment.
2. Bring your blood pressure, SpO2, and urine test results to the provider.
3. Stay hydrated with oral rehydration solution and avoid salty foods until evaluated.

4. Rest in a semi-recumbent position and avoid strenuous activity.

5. If you develop severe headache, visual changes, swelling, or chest pain, call emergency services immediately.

Since you are beyond 40 weeks, monitor fetal movements closely, avoid heavy lifting, and prepare for delivery with a birth plan and transport arrangement. Immediate medical review is essential to manage potential complications.

■ Urgent Alerts

- Urgent medical evaluation required for hypertension, low SpO2, and proteinuria.
